ROTATIONAL MOLDING & LANDSCAPE LIGHTING

LED Tree Ring Installation Instruction sheet

Tools needed: *9/16th hex bolt driver bit, screw gun, ladder, level*

1. Before doing anything we recommend to test the ring and make sure no bulbs have come loose during shipping.

2. 2 people is recommended for install and you should mark the height on the tree you would like it to be. It makes it easier when on the ladder.

3. Undo the winged nut hinge fastener, open up the ring and wrap it around the tree. At this time, you should make sure the lights are aligned with what side of the tree you want to illuminate.

4. Tighten the winged nut and then using two ladders begin to lift the ring to the mark on the tree.

5. Once at the the height tighten the 9/16th hex bolts one by one until it is secure, centered, and level on the tree.

6. Once the ring is secure, the installer will run the electrical up to the box. All connections are made in the box.

7. Adjust the lights any way desired and make sure the spotlight bracket is tight so they do not move.
